### 8.2 Exposure controls

#### Personal protective equipment:

#### General protective and hygienic measures:

The usual precautionary measures are to be adhered to when handling chemicals.  
Avoid close or long term contact with the skin.

#### Respiratory protection:

No respiratory protection is ordinarily required under normal conditions of use. Select a filter suitable for combined particulate/ gases and organic vapours (boiling point > 65 °C, AP2, EN 14387), if exposure limit is exceeded or when aerosol or mist is formed.

#### Protection of hands:

Safety gloves of nitrile rubber or viton.  
Preventive skin protection by use of skin-protecting agents is recommended.

#### Material of gloves

Fluorocarbon rubber (Viton)  
Nitrile rubber, NBR

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

#### Penetration time of glove material:

The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.  
Value for the permeation: Level = 6 (480 min)

**Eye protection:** Safety glasses with side shields or chemical goggles are required.

**Body protection:** Protective work clothing.
