Vestas IntelliLight replaces OCAS®

This letter is to inform you that the Vestas OCAS® system has changed name to Vestas IntelliLight. The name change is purely marketing driven, as Vestas wanted to have a product name linked closer to the functionality of the product. The system and its functionality remains the same as before the name change.

One aspect of the name change is that whereas the OCAS® system was based on an L-band radar sensor, the Vestas IntelliLight is based on either L-band or X-band radar sensors, pending on national regulations and certifications. Hence Vestas IntelliLight is regarded by the customers as an enhanced version of the OCAS system.

With reference to the certification process of the OCAS system in Germany, the only change is the new name. All certification tests and documentation provided for OCAS in Germany, remains valid. All documentation and demonstrations have been executed on an OCAS system with an X-band radar sensor.

Yours sincerely
Vestas Wind Systems A/S
